The development of the Character Strengths and Virtues (CSV) handbook represents the first attempt on the

part of the research community to identify and classify the positive psychological traits of human beings. Much

like the Diagnostic and Statistical Manual of Mental Disorders (DSM) on

general psychology, the CSV

provides a theoretical

framework to assist in developing practical

applications for positive psychology. This

manual identifies six classes of

virtue (i.e. "core virtues"), made up of twenty-four measurable character strengths.

Japan's power in Asia grew with the demise of the tsarist regime in Russia and the disorder of the 1917

Bolshevik Revolution in Siberia. Wanting

to seize the opportunity, the Japanese army planned to occupy as far west as Lake Baikal. To do so, Japan had to negotiate an agreement with China allowing the transit of Japanese troops through Chinese territory.

Although the force was scaled back to avoid antagonizing the United States, more than 70,000

Japanese troops joined the much smaller units of the Allied Expeditionary Force sent to Siberia in 1918.

Thermodynamic power cycles are the basis for the operation of heat engines, which supply most of the world's electric power and run almost all motor vehicles. Power

cycles can be divided into two types of heat engines. They seek to model the most common cycles that model internal combustion engines are the Otto cycle, which models gasoline engines and the Diesel cycle, which models diesel engines. Cycles that model external combustion engines include the Brayton cycle, which models gas turbines, and the Rankine cycle, which models steam turbines.

Hate law regulations can be divided into two types: those which are designed for public order and those which

are designed to protect human dignity. Those

designed to protect public
order require a higher threshold to be
violated, so they are not specifically enforced
frequently. For example, in Northern Ireland, an Act of 1992 only
allows one person to be prosecuted for violating that regulation
in only one

years. Those meant to protect human dignity have a much lower threshold to be violated, so those in Canada,

Denmark, France, Germany and the Netherlands seem to be frequently enforced.

Since the invention of the telescope, three more planets have been discovered in our solar system: Uranus (1781), Neptune (1846) and Pluto (1930). Pluto

was reclassified as a dwarf planet in 2006. In
addition, our solar system is
populated by thousands of
small bodies such as asteroids
and comets.

Most of the asteroids orbit in a region between the orbits of Mars and Jupiter, while the home of comets lies far
beyond the orbit of Pluto, in the Oort Cloud.

The Kepler conjecture is a mathematical conjecture, about Sphere packing in three-dimensional Euclidean space. It

is named after Johannes Kepler (1571-1630) who first
 had this idea. Kepler supposed that
 the two spheres of equal
 size that result in the packing with the
 highest density are face-centered cubic or
 packing.

These packings have a density of slightly over 74 percent, this means that they fill about 74 percent of space available.

White attacks immediately, sacrificing the white knight for two pawns, although generally White would need

three pawns for the knight to have material equality. Before

making this sacrifice, White has to calculate to make sure he is going to gain some of them that compensate for the material.

In this case, as the following moves show, White knows that he will gain an attack on the enemy king, forcing

Black to either surrender more material or allow checkmate.
