

Writing Scoring Criteria

Key Points: Production

6.4 Extended Speaking and Writing Tasks

The writing and speaking tasks are scored by automated scoring algorithms developed by ML and NLP experts at Duolingo. There are two separate algorithms: one for the speaking tasks and one for the writing tasks. Currently, the scores for the tasks are estimated at the portfolio level—meaning that the speaking score that is included in the total score represents test taker performance on the four speaking tasks and the writing score represents test taker performance on the four writing tasks.

The speaking and writing scoring systems evaluate each task based on the features listed below.

- Grammatical accuracy
- Grammatical complexity
- Lexical sophistication
- Lexical diversity
- Task relevance
- Length
- Fluency & acoustic features (speaking)

Life expectancy is increasing all around the world, and this has both positive and negative implications.

Topic sentence

Life expectancy is increasing all around the world, and this has both positive and negative implications. One of the most concerning implications is the burden it has on the taxpayer. Since more and more people are living longer and having longer retirements, there is a shortage of funds available for essentials such as pensions and healthcare. As a result, younger people are picking up the bill through higher taxes.

Life expectancy is increasing all around the world, and this has both positive and negative implications. One of the most concerning implications is the burden it has on the taxpayer. Since more and more people are living longer and having longer retirements, there is a shortage of funds available for essentials such as pensions and healthcare. As a result, younger people are picking up the bill through higher taxes. On the other hand, there are social benefits of this phenomenon. One benefit is that grandparents have more time to spend with their grandchildren, which can help build a stronger sense of community and encourage family values.
